Advanced Course Learning Objectives

On completing an advanced course, each participant is expected (within the Bobath concept) to be able to:

- a. Articulate a clear understanding how a change at the impairment level can impact on the patient's clinical presentation and level of functioning.
- b. Initiate and implement problem solving strategies for persons with neurological disorders.
- c. Validate specific handling skills, environmental modifications and the use of verbal cues through self-evaluation.
- d. Identify patient potential and achieve optimal function.
- e. Consider the theoretical evidence base and in-depth movement analysis to assist treatment intervention.
- f. Evaluate response to treatment using relevant outcome measures.
